DETAILED ACTION

In the reply filed on October 31, 2008, claims 1, 5, 8, 11, 14 and 20 have been amended. Claims 1, 8, 11, 14, 20, 22 and 25 are amended, and claim 21 is canceled in the examiner's amendment indicated below. Claims 1-20 and 22-25 are pending.

Allowable Subject Matter

Claims 1-20 and 22-25 are allowed.

The following is an examiner's statement of reasons for allowance:

With respect to claims 1, 5, 8, 11, 14, 20 and 25, The prior art on record does not teach, disclose or fairly suggest the claim limitations including, placing non-compliant data/key information in a stuffing bytes portion of the PES packet and decoding/decrypting portion of the data stream after replacing non-compliant data/key information with compliant data in the PES packet. Claims 2-4, 6-7, 9-10, 12-13, 15-19 and 22-24 depend from claims 1, 5, 11, 14 and 20 respectively and are allowed with the same rationale thereto.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jonathan Miller, Reg. No. 48,534 on January 143, 2009.

The application has been amended as follows:

In the claims:

1. (Currently Amended) A method, comprising:
parsing a data stream to find a predefined synchronization point within a packetized elementary stream (PES) packet in the data stream; and
placing non-compliant data in a stuffing bytes portion of the PES packet that is separate from the synchronization point and a payload in the PES packet;
~~wherein the data stream is decodable~~ decoding the data stream by a compliant decoder, after the non-compliant data is replaced with compliant data.
8. (Currently Amended) A system, comprising:
an hardware authoring device ~~to use key information to encrypting~~ a portion of a data stream using key information, the key information being in a stuffing bytes portion of a packetized elementary stream (PES) packet that is separate from a synchronization point and a payload of the PES packet in the data stream; and
a hardware consumption device in communication with the authoring device, the consumption device ~~to use the key information to decrypting~~ the portion of the data stream using the key information and ~~to replace~~ replacing the key information with compliant data.

11. (Currently Amended) A system, comprising:

an hardware authoring device to create a data stream;
an encryption tool ~~to embed~~ding key information in a stuffing bytes portion of a packetized elementary stream (PES) packet that is separate from each synchronization point and a payload of the PES packet in the data stream and ~~to encrypting~~ a portion of the data stream associated with each synchronization point; and

a hardware consumption device ~~to retrieve~~ retrieving key information separate from each synchronization point and the payload of the PES packet in the data stream and ~~to replace~~ replacing the key information with compliant data and ~~to use the key information to decrypting~~ the data stream using the key information.

14. (Currently Amended) A machine-accessible medium having a set of instructions stored thereon, which when executed cause a machine to perform a set of operations associated ~~content capable of directing the machine to perform a method, the method~~ comprising:

parsing a first data stream to find a packetized elementary system (PES) header of a PES packet, the PES header associated with at least some payload data in the PES packet;

copying the first data stream to a second data stream; ~~and~~

selectively inserting compliant data into in a stuffing bytes portion of the second data stream after the PES header and separate from the at least some payload data, to hold key information associated with the PES header;

decrypting the portion of the second data stream with the key information; and
replacing the key information with compliant data in the portion of the second data stream.

20. (Currently Amended) A method, comprising:

transmitting a packetized elementary stream (PES) packet to a consumption device, the PES packet including

a header,

key information in a stuffing bytes portion that is separate from and associated with the header for use in decryption, ~~and~~

a payload associated with the header and separate from the key information, ~~the payload capable of being encrypted~~ encrypting the payload using the key information; and
replacing the key information associated with the header, before decryption.

21. (Canceled).

22. (Currently Amended) The method of claim ~~24~~20, wherein the header, compliant data, and decrypted payload are capable of being decoded by a compliant decoder.

25. (Currently Amended) A machine-readable medium, having a set of instructions stored thereon, which when executed cause a machine to perform a set of operations comprising:

~~transmitting a data structure~~ packetized elementary stream (PES) packet to a consumption device, the ~~data structure~~ PES packet including consisting of:

a header,

key information in a stuffing bytes portion separate from and associated with the header for use in decryption, ~~and~~

a payload associated with the header and separate from the key information, ~~the payload capable of being encrypted~~ the encrypting the payload using the key information; and

replacing the key information associated with the header, before decryption.
